

How to Set up PostgreSQL database server

- [Download](#)
- [Installing](#)
- [Database Start-up](#)
- [pg-Admin](#)

Download

Download link: [PostgreSQL: Downloads](#)

⚠ Download the latest version.

If you experience any problems you can always try lower version later.

- Download PostgreSQL database according to the operating system on your computer.

- Proceed downloading according to the operating system on your computer.
 - Windows example

Windows installers

Interactive installer by EDB

Download the installer certified by EDB for all supported PostgreSQL versions.

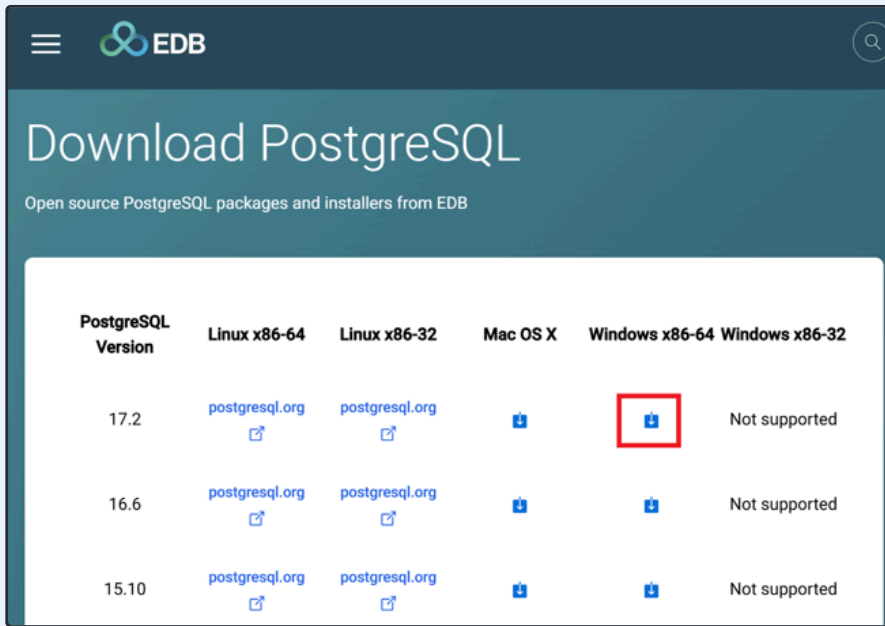

Note! This installer is hosted by EDB and not on the PostgreSQL community server.

This installer includes the PostgreSQL server, pgAdmin; a graphical tool for managing the database, integration, migration, replication, geospatial, connectors and other tools.

This installer can run in graphical or silent install modes.

The installer is designed to be a straightforward, fast way to get up and running.

Advanced users can also download a [zip archive](#) of the binaries, without the installer.

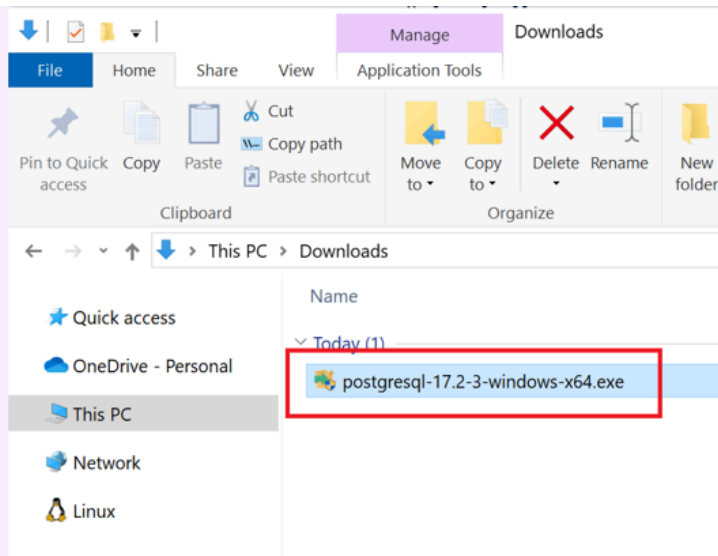

The screenshot shows the EDB website's 'Download PostgreSQL' page. The page has a dark blue header with the EDB logo and a search icon. Below the header, the title 'Download PostgreSQL' is displayed in large white text, followed by the subtitle 'Open source PostgreSQL packages and installers from EDB'. The main content area is a white box containing a table of download links for different PostgreSQL versions and operating systems. The table has columns for PostgreSQL Version, Linux x86-64, Linux x86-32, Mac OS X, Windows x86-64, and Windows x86-32. The 'Windows x86-64' column for version 17.2 is highlighted with a red box.

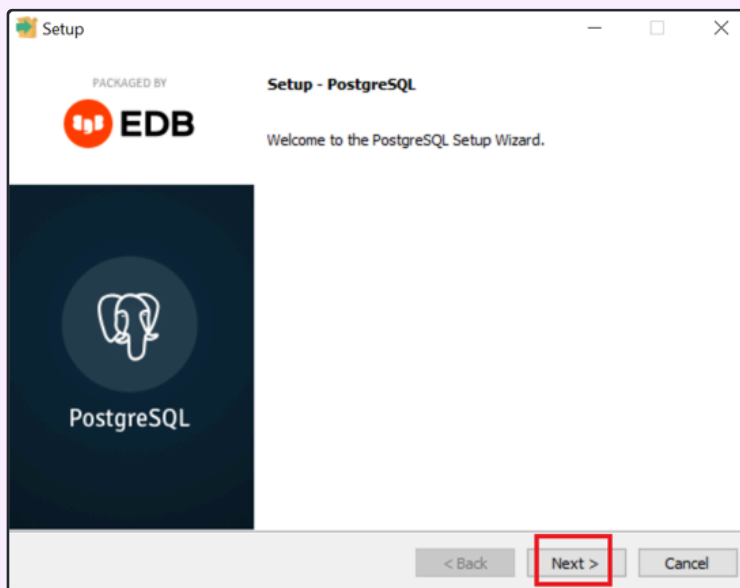

PostgreSQL Version	Linux x86-64	Linux x86-32	Mac OS X	Windows x86-64	Windows x86-32
17.2	postgresql.org 	postgresql.org 			Not supported
16.6	postgresql.org 	postgresql.org 			Not supported
15.10	postgresql.org 	postgresql.org 			Not supported

Installing

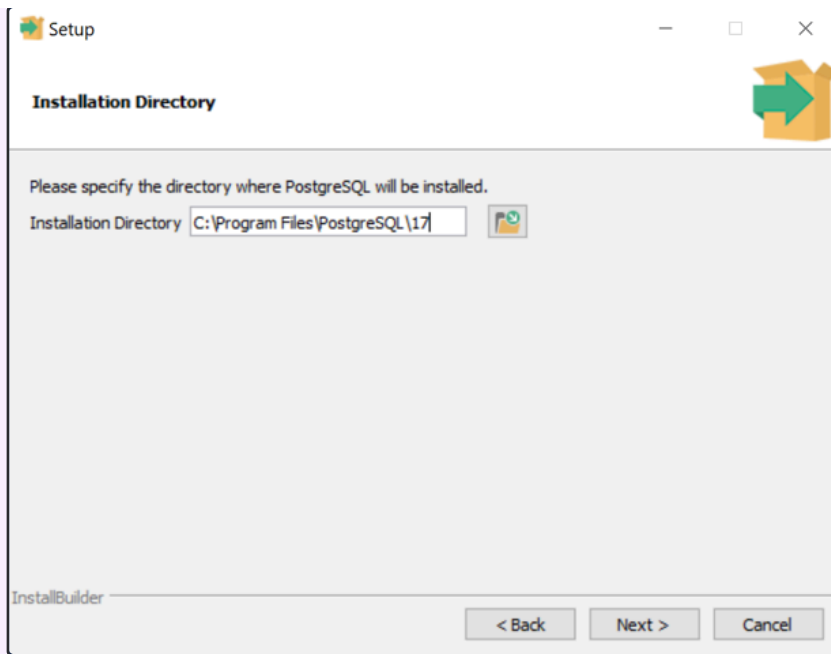

- Run installer

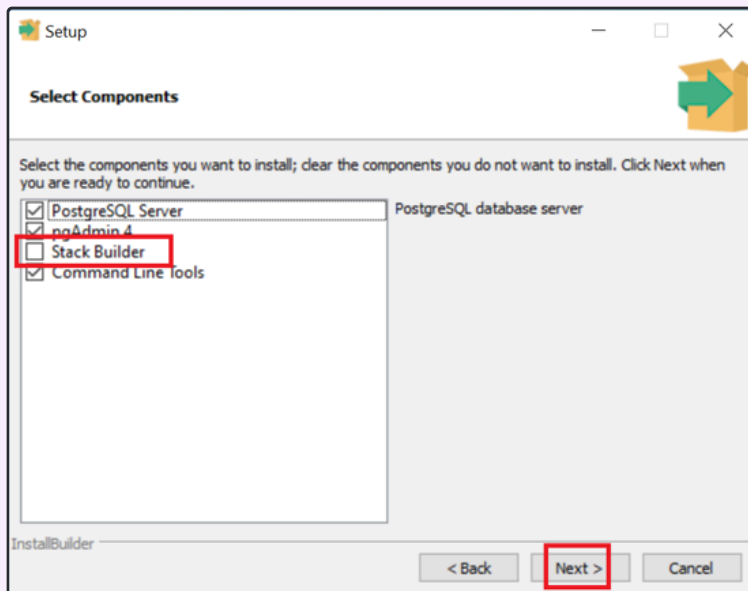

- → Next

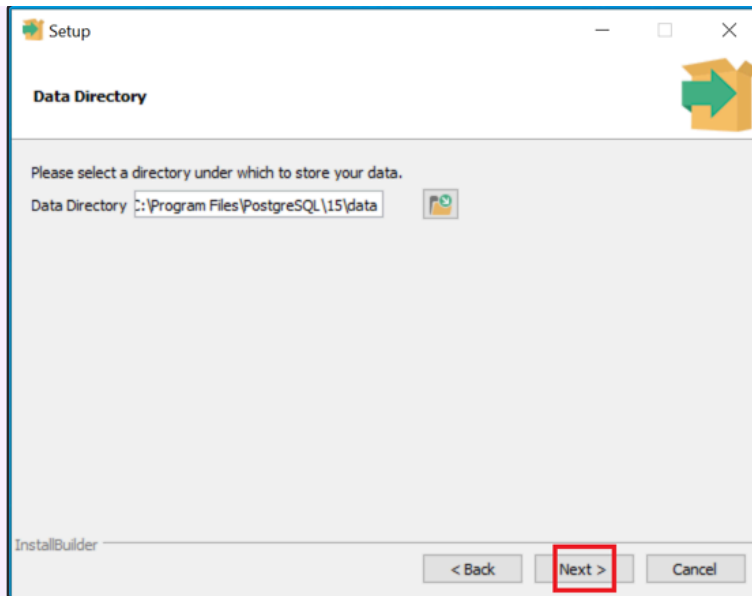

- Choose desired installation directory
- Default location is always OK
- → Next

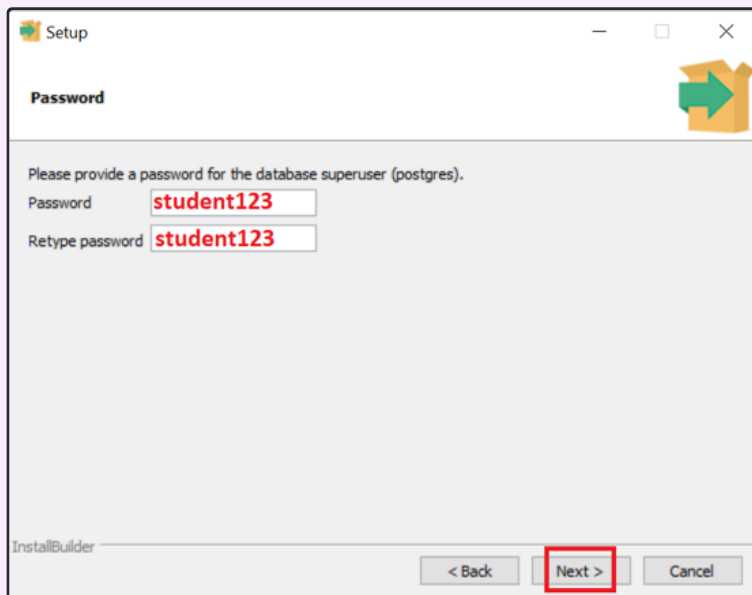

- You may remove Stack Builder from the components to be installed.
- → Next

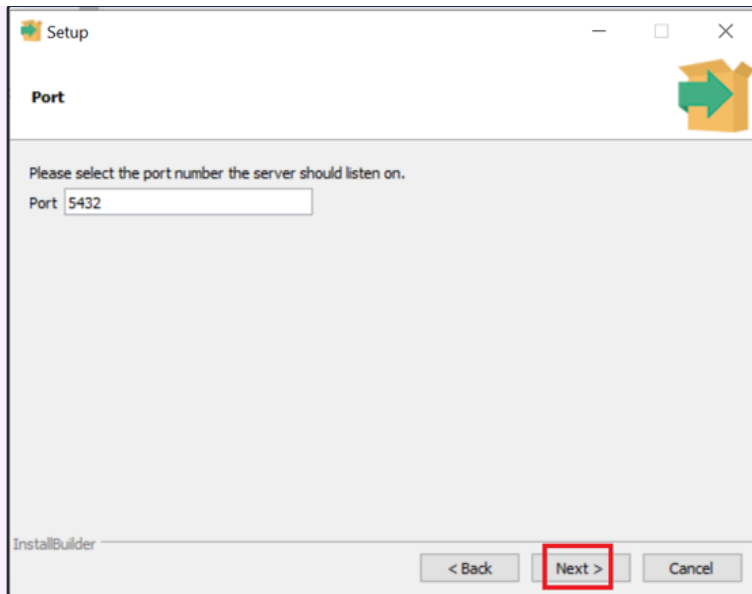

- Choose desired data directory
- Default location is always OK
- → Next

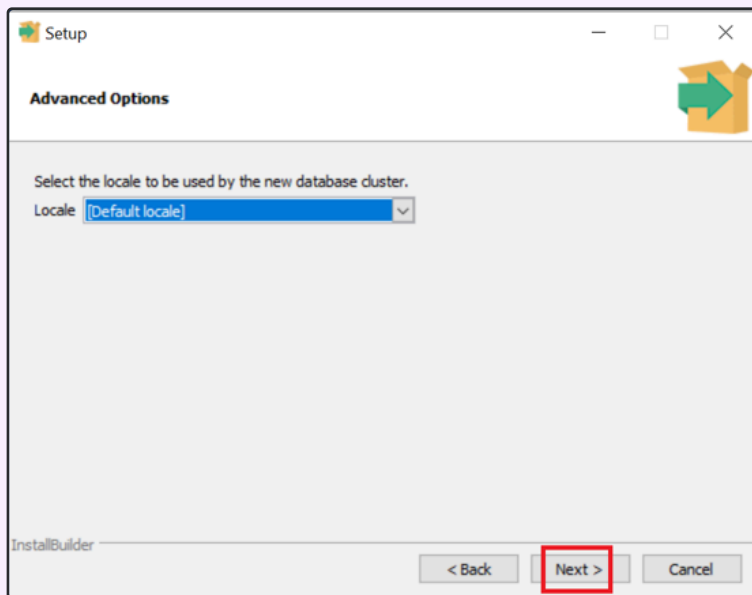

- Set the password to `student123`
- **NB! It is very important to use this password as Car Portal project will be configured to use this password to access database**

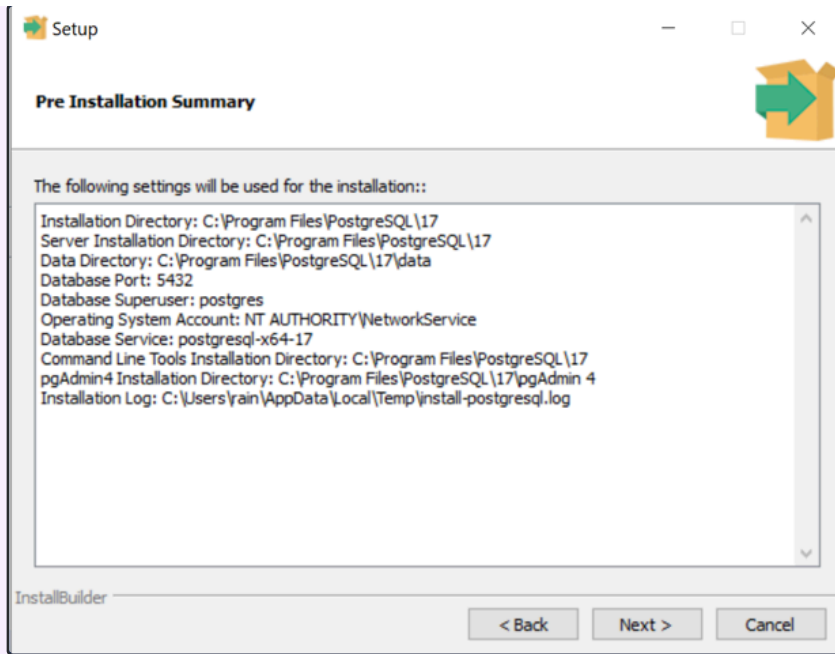

- Choose network port
- It is recommended to use the default port 5432

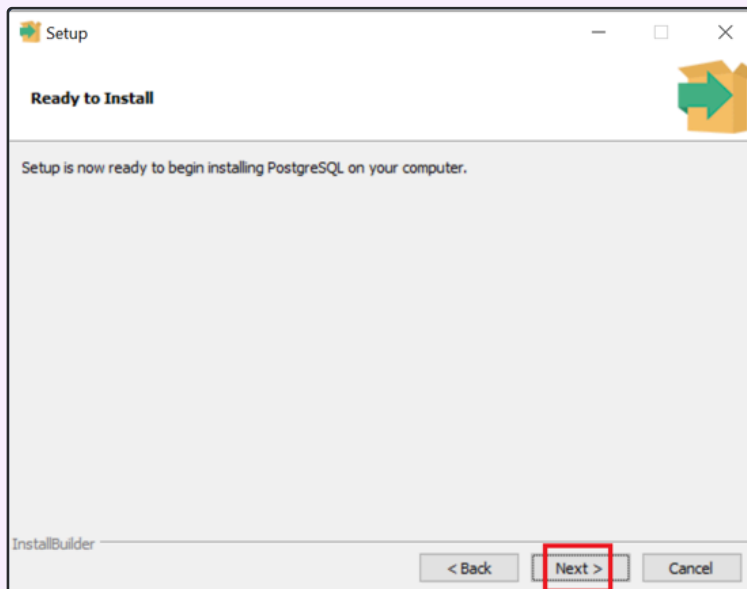

- Choose locale
- Default locale is OK
- → Next

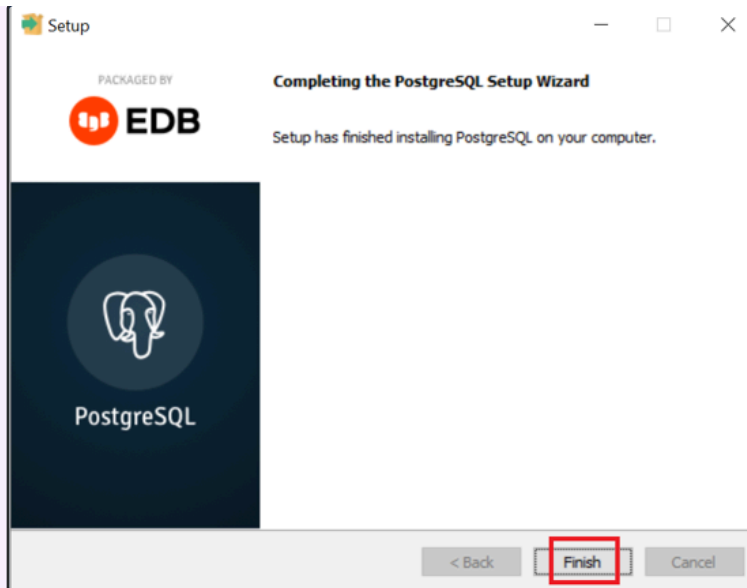

- → Next

- → Next

- → Finish

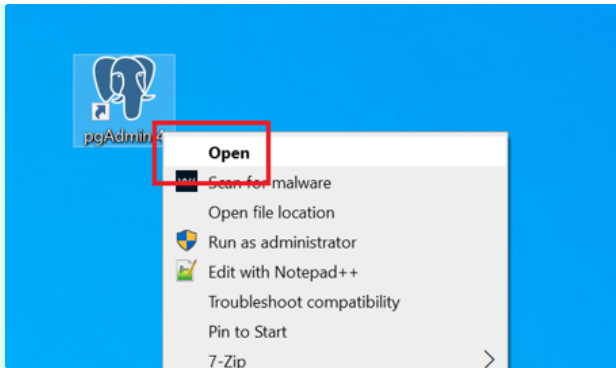

Database Start-up

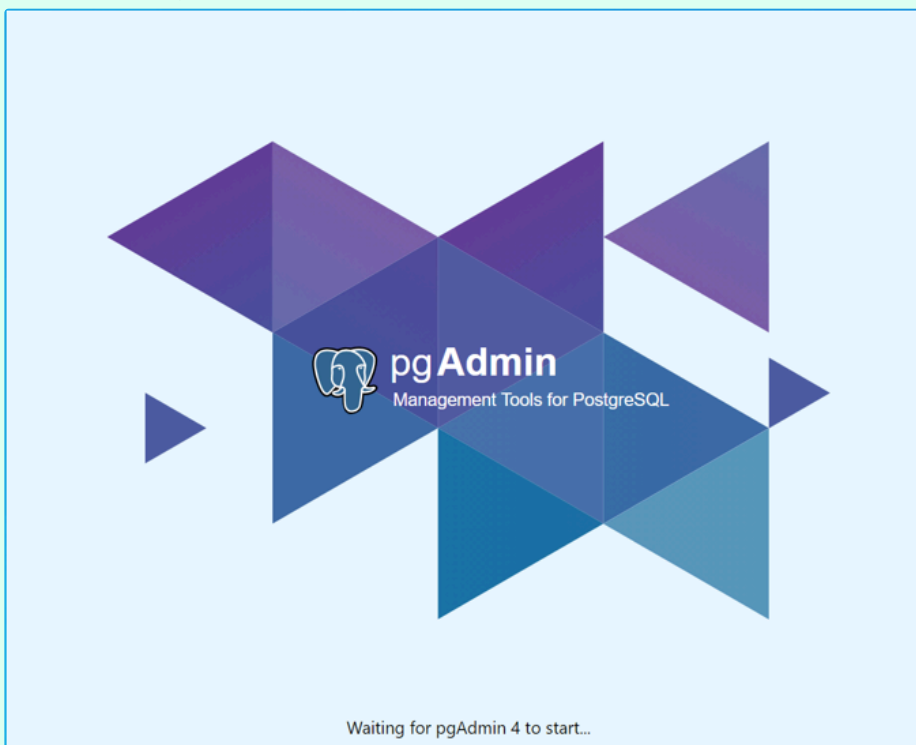

- The database starts automatically every time when starting the computer
 - There is no need to start it manually

pg-Admin

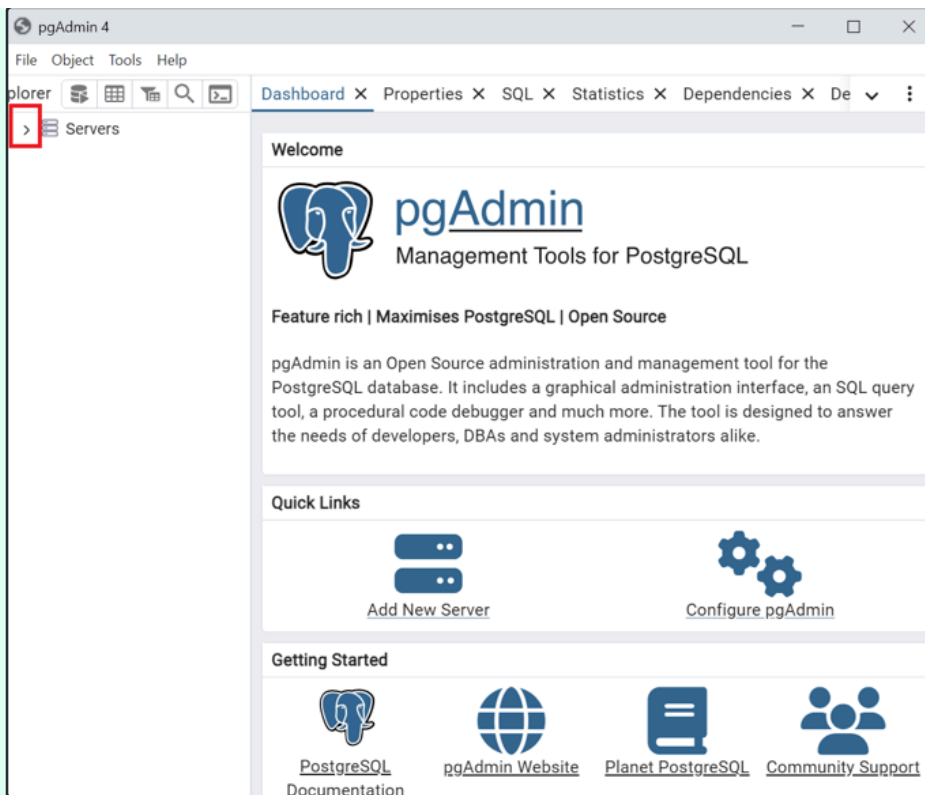

- ⚠ • Launching pgAdmin is not required to use the database and will not need to use pgAdmin in the course as we will use IntelliJ database feature
- **However it is important to at least open up pgAdmin once:**
 - to validate there is already example database named `postgres`
 - to validate you can connect to the database via pgAdmin
- ✓ • PostgreSQL comes with the SQL client pgAdmin, which is like browser that can be used to access the database and view the database content.
- Open pgAdmin4

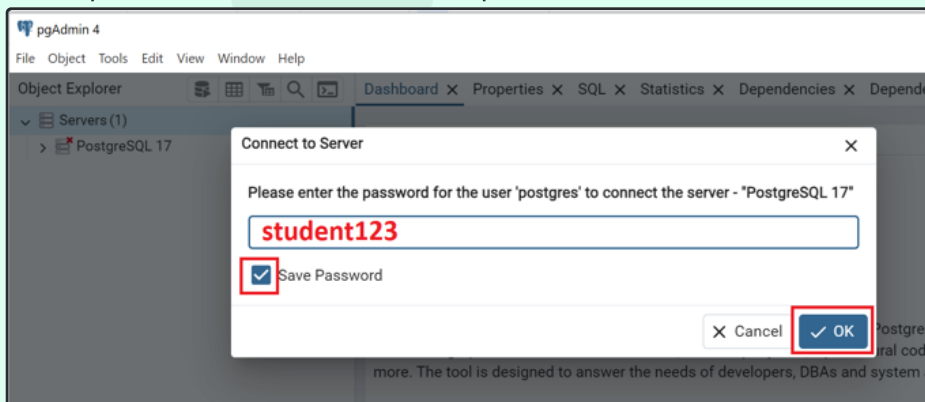

- Wait patiently until it opens up

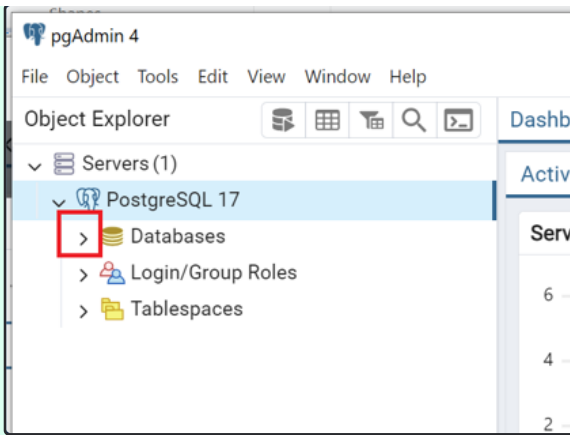

- Click **> Servers**

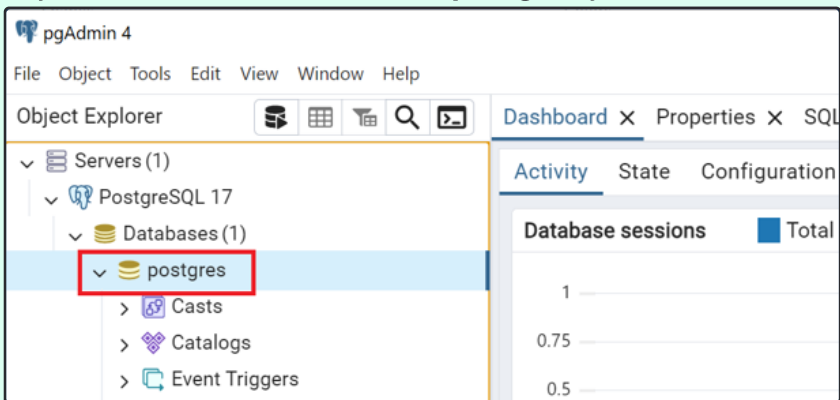

- Enter password `student123` as password

- Click `> Database`

- If you can see database named **postgres** you are all set

- If you don't see any database (Click on **Servers arrow(1)**, do you see **any servers (2)**):
Then follow the tutorial from this link [Create new database in PostgreSQL](#)
